

# Algebra

lectured by Prof. Dr. Frank Herrlich during fall 2014/2015 at the KIT

*Written in  $\text{\LaTeX}$  by Arthur Martirosian, [arthur.martirosian@student.kit.edu](mailto:arthur.martirosian@student.kit.edu)*

12. Dezember 2016

# Inhaltsverzeichnis

<b>I</b>	<b>Galois theory</b>	<b>5</b>
§ 1	Algebraic field extensions . . . . .	5
§ 2	Simple field extensions . . . . .	11
§ 3	Galois extensions . . . . .	18
§ 4	Solvability of equations by radicals . . . . .	23
§ 5	Norm and trace . . . . .	31
§ 6	Normal series of groups . . . . .	36
<b>II</b>	<b>Valuation theory</b>	<b>41</b>
§ 7	Discrete valuations . . . . .	41
§ 8	The Gauß Lemma . . . . .	45
§ 9	Absolute values . . . . .	49
§ 10	Completions, $p$ -adic numbers and Hensel's Lemma . . . . .	55
<b>III</b>	<b>Rings and modules</b>	<b>63</b>
§ 11	Multilinear Algebra . . . . .	63
§ 12	Hilbert's basis theorem . . . . .	74
§ 13	Integral ring extensions . . . . .	77
§ 14	Dedekind domains . . . . .	83
